## Veterans Memorial Bridge

---

### **Veterans Bridge/Columbia/Wrightsville, Pennsylvania, United States | Spring City Electrical**

The project entailed removal of the existing cobra-head fixtures and replacement of them with replicas of the original decorative light fixtures. The cobra head fixtures dated back to the 1940s and were deteriorating. The new LED replacement lights are a replica of the style of fixtures used in 1930, the year the bridge opened. The new lights will be more energy-efficient than those being replaced. This dramatically improved the visitor's first impression of the bridge. The project restored the historic authenticity of the Veterans' Memorial Bridge.
